WORLDVIEWS. WHEN AI MEETS GEOPOLITICS AND RELIGIOUS STUDIES

The aim of the seminar is to assess the contribution that two distinct social sciences, geopolitics and religious studies, can give to the current debate on the role of Artificial Intelligence in society. Both can offer a global perspective on the role of AI, also in different societies. The workshop is understood as a first step towards the "Artificial Intelligence and Religion" conference that the ISR will organize in March 2020 in Trento.

It is embedded in within the mission on religion and innovation of the Center for Religious Studies at Fondazione Bruno Kessler (FBK) and continues also the work of the 2018 workshop and lecture series on "Religion and Innovation" and of the 2017 exploratory workshop on "Transnational Law, Geopolitics and Religion".

The event is organized in cooperation with «Limes Rivista Italiana di geopolitica»
